## Light and shadows

### What is light?

Light is a type of energy that lets us see things

If there is no light then it is dark and we cannot see anything

### Reflections

Shiny surfaces reflect light

Matt surfaces don't reflect light very well

### Key Vocabulary

absorb	Take in or soak up
dark	The absence of light
energy	A supply of power. The ability to do work
light	A type of energy. We can see objects because our eyes can sense light
light source	Where light comes from, eg a candle, the Sun
mirror	A shiny surface that reflects light in a regular way
opaque	Not clear. Blocks light so that none gets through
reflect	To throw back or bounce light from a surface
shadow	a dark shape or outline of something that is made when light is blocked
transparent	clear, see-through, lets light pass through
translucent	Almost see through, lets some light through

### Sunlight

The light from the sun can be dangerous. It can damage our eyes. We must never look directly at the sun. We can protect our eyes by wearing sunglasses or sunhats in bright sunlight.

### Shadows

An opaque object blocks the light from getting through. A dark shape or outline is formed. This is a shadow

We can change the size of the shadow by changing the position of the:

- light source
- object
- surface where the shadow is being made
